- AB The title catalysts are prepared by drying solns. or slurries containing Mo, V, and Te and/or Sb, heating under substantially O-free atmospheric, then heating under O-containing gas. Acrylic acid is prepared by gas-phase oxidation of propane by using the catalysts. A gaseous mixture of propane, air, and steam was introduced to a fixed bed reactor filled with a catalyst prepared by heating MolVO.3TeO.23NbO.12On, then treated at 380° for 2 h to give 52.5% acrylic acid.

AB Propane or isobutane is catalytically oxidized in gas phase in the presence of catalysts containing Mo, Sb, V,
O, and A (A represents ≥1 elements selected from Nb, Ta,
Sn, W, Ti, Ni, Fe, Cr, and Co) to give (meta)acrylic acids.
Oxidation of propane with O2 at 400° for 10 h in the presence of a catalyst prepared from ammonium metavanadate, antimony oxide, ammonium molybdate, and niobic acid gave acrylic acid (I) in high yield with conversion 30.9% and I selectivity 29.5%.

L6 ANSWER 118 OF 118 CAPLUS COPYRIGHT 2005 ACS on STN ΤI Catalysts for oxidation of propylene to acrolein or acrylic acid AN 1969:449291 CAPLUS 71:49291 DN ΤI Catalysts for oxidation of propylene to acrolein or acrylic acid Kashiwabara, Hideyuki; Nakamura, Yasushi IN PA Asahi Electro-Chemical Co., Ltd. so Jpn. Tokkyo Koho, 8 pp. CODEN: JAXXAD DT Patent LAJapanese FAN.CNT 1 PATENT NO. KIND DATE APPLICATION NO. \_\_\_\_\_ --------------ΡI JP 43024645 B4 19681024 JP 19660418 In manufacturing acrolein (I) or acrylic acid (II) or a mixture of I and II by catalytic reaction in gaseous propylene (III) and O, catalytic systems containing Mo, V, W, Te, Sb, Sn, or Bi, with O, were used. In an example, a solution of 72.0 parts MoO3 and 40.2 parts H2WO4.H2O in NH4OH, an aqueous solution of 11.7 parts NH4VO3, a solution of 70.1 parts SnCl4.5H2O in aqueous HCl and a solution of 3.2 parts Te in HNO3 were mixed and gradually evaporated to dryness with stirring vigorously on the water bath. The catalyst (between 6-20 mesh in a quartz tube) was heated in air stream at .apprx.470° 4 hrs. and at 358-470° for .apprx.2 hrs., then in O stream at 150-358° 3 hrs. to yield a catalytic mixture (IV): atomic ratio given, Mo-V-W-Te-Sn 5:1:1.5:0.5:2. A mixture of crude III (93% III, main impurities: propane, ethane), O and steam (mole ratio, III-O-H2O 1:1.6:6) was introduced into a stainless-steel tube filled with IV at 450° under the atmospheric pressure at apparent contact time of 3 sec. to yield II containing I, AcOH, and AcH yielded II; % conversion III-II = 66.5%. => Nb 117860 NB 6944 NBS L7 124614 NB (NB OR NBS) => 16 not 17 28 L6 NOT L7 L8=> d 18 18-28 ti ANSWER 18 OF 28 CAPLUS COPYRIGHT 2005 ACS on STN 1.8 Production method of (meth) acrylic acid using mixed metal TIoxidation catalysts ANSWER 19 OF 28 CAPLUS COPYRIGHT 2005 ACS on STN L8TI Method for producing acrylic acid by the heterogeneously catalyzed gas-phase oxidation of propane L8 ANSWER 20 OF 28 CAPLUS COPYRIGHT 2005 ACS on STN TI Manufacture of metal oxide catalyst containing Mo, V, and Sb ANSWER 21 OF 28 CAPLUS COPYRIGHT 2005 ACS on STN L8TI Manufacture of acrylonitrile and/or'of acrylic acid with mixed metal oxide catalysts from propane with low sulfur content ANSWER 22 OF 28 CAPLUS COPYRIGHT 2005 ACS on STN L8 Catalytic performance of hydrothermally synthesized Mo-V

- The invention relates to a manufacture of metal oxide catalyst which is used AB for the production of acrylic acid from propane at high yield. The process comprises effecting a reaction of an Sb(III)-containing compound with an oxidizing agent to oxidize Sb(III) to Sb(V), and adding a V(V)-containing compound and heating to  $\leq 70^{\circ}$  to convert the remaining Sb(III) to Sb(V).

AB H2C:CHCN and/or H2C:CHCO2H are manufactured by gas-phase oxidation of propane in the presence of mixed metal oxide catalysts containing Mo, V, Te, and/or Sb with

controlling S content of gas supplied to a reactor to  $\leq 200$  ppm. Thus, a gaseous mixture (containing 0.235 ppm S) of **propane**, NH3, O, and N was passed through a fixed bed reactor in the presence of MolV0.3Te0.16Nb0.12On/SiO2 over 300 h to show almost no catalyst deactivation.

- AB Hydrothermally synthesized Mo6V2Sb1Ox and Mo6V3Te1Ox mixed oxide catalysts were evaluated for methane, ethane and propane oxidation. The catalysts were very active for oxidative dehydrogenation of ethane with 80% ethylene selectivity, nearly independently of reaction temperature (300-400°). Grinding-treatment made the catalyst more selective by suppressing COx production. The catalysts were inactive for methane oxidation, but they were highly active for propane oxidation to acrylic acid.

- AB An arrangement of catalytically active elements of Mo, V , and Te in an oxide solid with a single crystallog. phase was

successfully done by the hydrothermal synthetic method. A black solid powder with a rod-shape (by SEM) was obtained. This catalyst material was first air-treated at 280° for 2 h, by which Te was stabilized in the structure. The air-treated sample was then heat-treated at 600° in a N stream. It was revealed by XRD anal. that this treatment made the solid in a well-crystallized state. Finally, to break the rods into fine powders, the well-crystallized rod-shaped material was ground, by which a face of the cross-section of the rods seems to be preferentially appeared. Thus obtained catalyst, Mo6V3Te10x, showed a high activity for the selective oxidation of propane to acrylic acid at 360°. Since the grinding is the most effectual determinant in the propane conversion and the acrylic acid formation, the surface on the cross-section part of the rod-shaped crystals is active for the selective oxidation It was assumed that all the elements of Mo, V, and Te arrange in this surface and effectively promote the consecutive oxidation from propane to acrylic acid via propene and acrolein. THERE ARE 17 CITED REFERENCES AVAILABLE FOR THIS RECORD ALL CITATIONS AVAILABLE IN THE RE FORMAT ANSWER 24 OF 28 CAPLUS COPYRIGHT 2005 ACS on STN Selective oxidation of light alkanes over hydrothermally synthesized Mo-V-M-O (M = Al, Ga, Bi, Sb, and Te ) oxide catalysts 2000:564783 CAPLUS 133:335477 Selective oxidation of light alkanes over hydrothermally synthesized Mo-V-M-O (M = Al, Ga, Bi, Sb, and Te ) oxide catalysts Ueda, W.; Oshihara, K. - AB hydrothermally synthesized Mo-V-M-O (M = Al, Ga, Bi, Sb, and Te) complex metal oxide catalysts. All the synthesized solids were rod-shaped crystallites and gave a common XRD peak corresponding to 4.0 A d-spacing. From the different XRD patterns at low angle region below 10° and from the different shape of the cross-section of the rod crystal obtained by SEM, the solids were classified into two groups: Mo-V-M-O (M = Al, possibly Ga and Bi) and Mo-V-M-O (M=Sb, and Te). The former catalyst was moderately active for the ethane oxidation to ethene and to acetic acid. On the other hand the latter was found to be extremely active for the oxidative dehydrogenation. Mo-V-M-O (M = Sb, and Te) catalysts were also active for the propane oxidation to acrylic It was found that the grinding of the catalysts after heat-treatment at 600°C in N2 increased the conversions of propane and enhanced the selectivity to acrylic acid. Structural arrangement of the catalytic functional components on the surface of the cross-section of the rod-shaped catalysts seems to be important for the oxidation activity and selectivity.

AB The title catalysts are prepared by drying solns. or slurries containing Mo, V, and Te and/or Sb, heating under substantially O-free atmospheric, then heating under O-containing gas. Acrylic acid is prepared by gas-phase oxidation of propane by using the catalysts. A gaseous mixture of propane, air, and steam was introduced to a fixed bed reactor filled with a catalyst prepared by heating Mo1V0.3Te0.23Nb0.12On, then treated at 380° for 2 h to give 52.5% acrylic acid.

ΡI	JP 43024645 B4 19681024 JP 19660418
AB	In manufacturing acrolein (I) or acrylic acid (II) or a mixture of I and
	II by catalytic reaction in gaseous propylene (III) and O, catalytic
	systems containing Mo, V, W, Te, Sb,
	Sn, or Bi, with O, were used. In an example, a solution of 72.0 parts MoO3
	and 40.2 parts H2WO4.H2O in NH4OH, an aqueous solution of 11.7 parts NH4VO3, a
	solution of 70.1 parts SnCl4.5H2O in aqueous HCl and a solution of 3.2 parts
	Te in HNO3 were mixed and gradually evaporated to dryness with
	stirring vigorously on the water bath. The catalyst (between 6-20 mesh in
	a quartz tube) was heated in air stream at .apprx.470° 4 hrs. and
	at 358-470° for .apprx.2 hrs., then in O stream at 150-358°
	3 hrs. to yield a catalytic mixture (IV): atomic ratio given, Mo-
	V-W-Te-Sn 5:1:1.5:0.5:2. A mixture of crude III (93% III,
	main impurities: propane, ethane), O and steam (mole ratio,
	III-O-H2O 1:1.6:6) was introduced into a stainless-steel tube filled with

IV at 450° under the atmospheric pressure at apparent contact time of 3

sec. to yield II containing I, AcOH, and AcH yielded II; % conversion III-II =
